

Prolog Program for a Database with NAME and DOB

Aim

To create a Prolog database containing a person's name and date of birth and retrieve the information using queries.

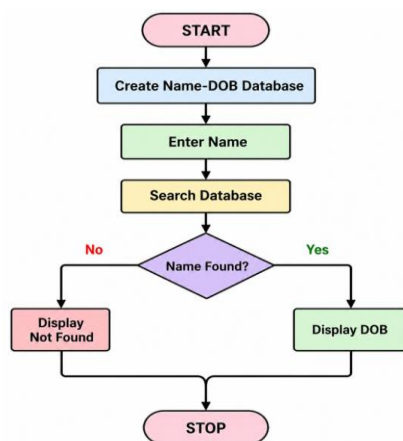

Objectives

- To understand facts in Prolog.
- To create a simple database.
- To retrieve information using queries.

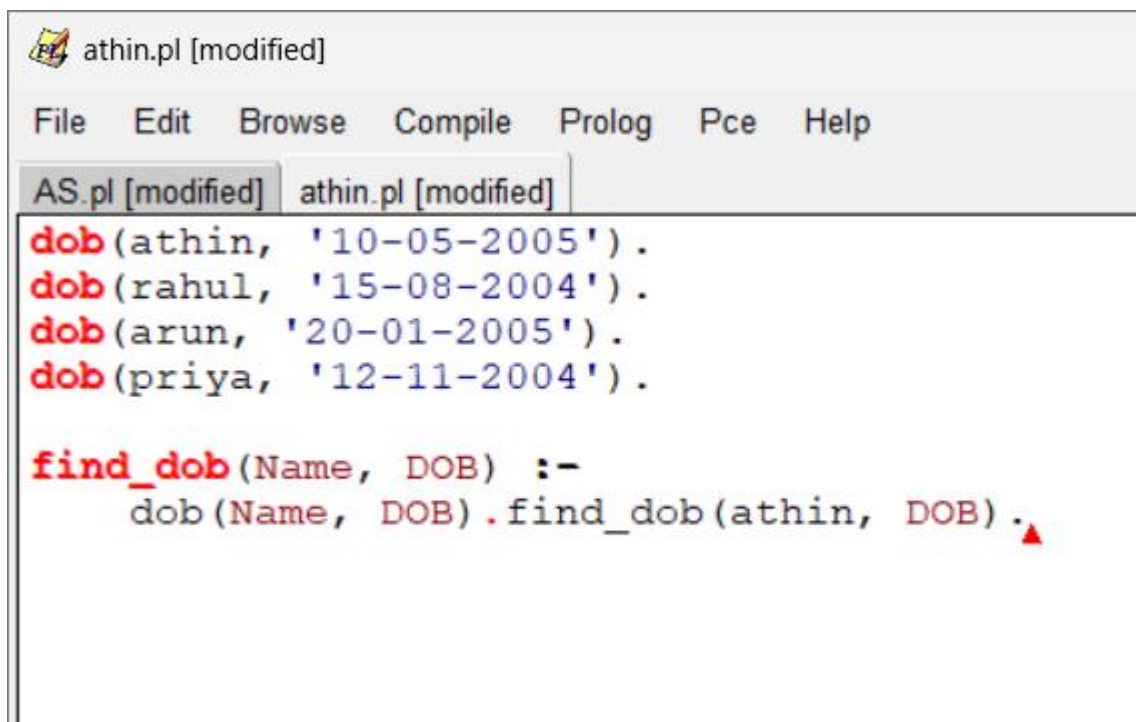

Algorithm

1. Start.
2. Define facts containing name and date of birth.
3. Create a rule to retrieve the DOB.
4. Enter a name as a query.
5. Display the corresponding date of birth.
6. Stop.

Flowchart

PROGRAM

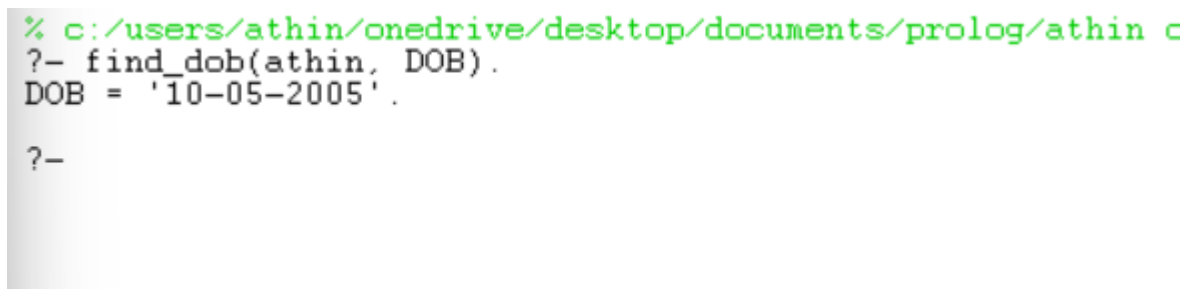

The image shows a Prolog IDE window titled 'athin.pl [modified]'. The menu bar includes 'File', 'Edit', 'Browse', 'Compile', 'Prolog', 'Pce', and 'Help'. Below the menu bar, there are two tabs: 'AS.pl [modified]' and 'athin.pl [modified]'. The main text area contains the following Prolog code:

```
dob(athin, '10-05-2005').
dob(rahul, '15-08-2004').
dob(arun, '20-01-2005').
dob(priya, '12-11-2004').

find_dob(Name, DOB) :-
    dob(Name, DOB).find_dob(athin, DOB).
```

OUTPUT

The image shows the output of a Prolog shell. The prompt is '% c:/users/athin/onedrive/desktop/documents/prolog/athin c'. The user enters the query '?- find_dob(athin, DOB).' and the shell returns 'DOB = '10-05-2005''. The prompt then returns to '?- '.

```
% c:/users/athin/onedrive/desktop/documents/prolog/athin c
?- find_dob(athin, DOB).
DOB = '10-05-2005'.
?-
```

Result

The Prolog database was successfully created and the date of birth was retrieved using the person's name.
