

Travelling Salesman Problem (TSP)

Aim

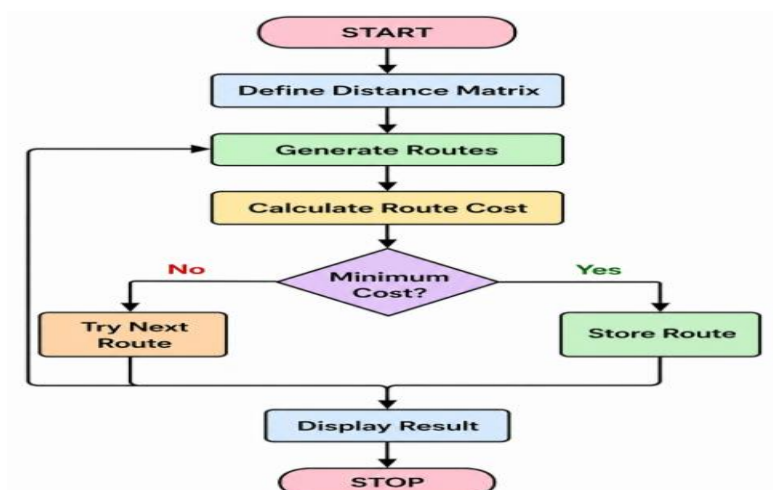

To find the shortest possible route that visits every city exactly once and returns to the starting city.

Objectives

- To understand optimization problems.
- To find the minimum cost path.
- To visit all cities exactly once.
- To implement a brute-force solution.

Algorithm

1. Start.
2. Define the distance matrix.
3. Select the starting city.
4. Generate all possible city permutations.
5. Calculate the total cost for each route.
6. Find the minimum cost route.
7. Display the optimal path and cost.
8. Stop.

PROGRAM
